DURHAM, N.H.— A national report from the University of New Hampshire shows close to one and a half million children each year visit a doctor, emergency room or medical facility as a result of an assault, abuse, crime or other form of violence. This is four times higher than previous estimates based only on data from U.S. emergency rooms for violence-related treatment.

In their study

utm_source=For_The_Media&utm_medium=referral&utm_campaign=ftm_links&utm_term=051221), recently published on JAMA Network Open, researchers from UNH's Crimes against Children Research Center (CCRC) used survey information from a representative sample of 8,503 children and youth from across the country, ages two to 17 years, as part of a series of nationwide studies in 2011 and 2014. They found that while the majority of those needing medical attention for violence exposure were teens, one third were under the age of 10. The rate of past-year medical visits due to violence exposure was 1.9% which is equivalent to a national estimate of 1.4 million children and teens. Previous estimates based on data obtained only from emergency rooms were 340,000 visits, which reflects a severe undercount of violence related medical treatment for children.

“This flood of visits to medical authorities each year by young crime victims means that our medical professionals need to know more about how to help, not only treating the injuries but how to counsel children and their families about how to stay safe and how to get appropriate help from schools, therapists and child protection agencies,” said David Finkelhor, director of the CCRC and lead author.

Most of the medical visits were to treat injuries but some were to document harms and others to seek supportive help for problems like bullying and sibling victimization. The violence responsible for these visits included gang violence, aggravated assault by peers, dating violence, sexual assault and parental abuse with the largest category being simple assault by other peers. Researchers say that children are the most crime exposed segment of the population, experiencing

“We should not be treating assaults as just a rite of passage for children,” said Finkelhor. “We need to build interpersonal safety into our education systems, our environments and prepare practitioners to provide resources on prevention and safety skills.”

The University of New Hampshire (<http://unh.edu>) inspires innovation and transforms lives in our state, nation, and world. More than 16,000 students from all 50 states and 71 countries engage with an award-winning faculty in top-ranked programs in business, engineering, law, health and human services, liberal arts and the sciences across more than 200 programs of study. As one of the nation's highest-performing research universities, UNH partners with NASA, NOAA, NSF and NIH, and receives more than \$110 million in competitive external funding every year to further explore and define the frontiers of land, sea and space.
